

**Mochikoro  
or  
Archipelago  
by Josh Kidd**

is either a "land" cell or a "water" cell. Fill them all in to solve the puzzle. Each numbered cell is land. For each number, there is one "island" of land cells, though not every island will have a number. Islands are strictly rectangular and may not have multiple numbers. Each land cell is a part of one and only one island; islands cannot overlap, nor can they touch each other except at their corners. All islands must be connected into a single "archipelago", such that all are diagonally contiguous. No 2X2 squares of water or "pools" are allowed.

Each cell of the grid

1				1		4			4					
														3
				2								6		
	12					6							1	
				2								2		1
2														
						8		12					2	
			3											
4		6		8				8		6				4
										3				
	2			12		8								
														2
1		2							2					
	1					6							12	
		6							1					
3														
					6			4		2				1
